

ECO-RICH

Hybrid Hydraulic Unit (EHU & UEHU)

Put money back into your wallet with a hydraulic unit so advanced that it can pay for itself in as little as 12 months.

HOW EXACTLY does the Eco-Rich create these amazing savings?

ENERGY

Lower energy consumption through advanced inverter technology provides longer unit life, reduced energy cost, and sustainable savings.

HEAT

A reduction of heat generation creates longer life for machine components and effectively reduces ambient workspace temperatures, resulting in reduced air conditioning demand and fewer opportunities for overheating.

OIL

Conventional hydraulic units require larger capacity tanks to dissipate heat than the EcoRich, which reduces oil disposal on average between 33-50%.

NOISE

Noise reduction creates a more comfortable and safe work environment, reducing worry and cutting cost on factory alarms and voice synthesizers.

STOCK

Compatibility and adaptability creates less need for on-hand stock, as the Eco-Rich works as a drop-in replacement for the vast majority of hydraulic pumps and motors within the industrial marketplace.
