# DC2-Wire Aluminum-Chip Resistant Cylindrical Proximity Sensors

Detects workpieces reliably even if aluminum or cast iron chips Series accumulate on the sensing head.

> DC2-wire proximity sensors can be directly connected to programmable controllers and N.C. units. This reduces wiring costs

()

- Firefly indicator lamp can be checked even from the rear
- Tough IP67 seal
- Certified EN-compliant

## ORDER GUIDE

#### Preleaded types

### USING THE SETTING INDICATOR

The proximity sensor can be set up to detect objects reliably by bringing the sensor progressively closer to the target object and installing the sensor at the point where the indicator lamp (N.O. indication) changes from red to green.

\*When the target object is made of a different material (such as aluminum, copper or stainless steel) from the standard target object (iron), the distance at which the indicator lamp changes color is shorter than the 80% maximum.

### MOUNTING BRACKET (sold separately)

Mounting brackets are made of polyacetal resin. Two screws and two washers are provided for each bracket.

#### FL-PA118 and FL-PA130 screw holes are oblong.

### WIRING DIAGRAMS

#### Preleaded type

В

⊲

#### Preleaded connector type(N.O. : CN03 type)

• The load may be connected to either pole.

- The LED operates normally during a load short circuit, so check the wiring if the output is wrong.
- Fasten connectors tightly by hand.

## CONNECTOR SPECIFICATIONS

#### Item Specifications Insulation resistance Max. 100MΩ(by 500Vdc megger) Dielectric strength 1,500Vac for 1 minute (between contacts, and between contact and connector housing) Max. $40m\Omega$ Initial contact resistance (with 3A current to connected male and female connectors. Semiconductor lead-specific resistance not included.) Mating/unmating force 0.4 to 4.0 N per contact Mating cycles 50 Connector nut tightening torque Min. 0.8N·m\*2 Cable pullout strength Min. 100 N Vibration resistance 10 to 55Hz, 1.5mm peak-to-peak amplitude, for 2 hours each in X, Y and Z directions Impact resistance 300m/s², 3 times each in X, Y and Z directions **Protective structure** IP67 Ambient operating temperature -10 to +70°C Ambient storage temperature -20 to +80°C Ambient operating humidity Max. 95% RH Contacts: Gold-plated brass Contact holder: Glass-lined polyester resin Housing: Polyester elastomer Materia Coupling: Ni-plated brass O-ring: NBR

20

\*1: Specifications assume Yamatake male/female connectors.

\*2: The recommended torque is 0.4 to 0.6N-m. If fastened poorly, the IP67 protection is lost, or looseness occurs. Fasten the connector securely by hand.

#### • Tightening the connector

Align the grooves and rotate the fastening nut on the **PA5** connector by hand until it fits tightly with the connector on the sensors side.

### PRECAUTIONS FOR USE

#### 1. Mounting

The allowable tightening torque varies according to the distance from the sensing face.

| Catalog listing | Length A | Max. tightening torque (N·m) |     |  |
|-----------------|----------|------------------------------|-----|--|
| Catalog listing | (mm)     | Α                            | В   |  |
| FL7M-2_6A_      | 10       | 20                           | 30  |  |
| FL7M-4	GA       | 0        | _                            | 70  |  |
| FL7M-8_6A       | 0        | -                            | 150 |  |

Note: The table shows the allowable tightening torque when toothed washers (provided) are used.

#### 2. Influence of surrounding metal

Metal other than the target object surrounding the sensor may influence operating characteristics. Leave space between the sensor and surrounding metal as shown below.

- A: Distance from sensing face of proximity sensor to mounting surface
- B: Distance from surface of iron plate to sensing face of proximity sensor.
- C: Distance from surface of iron plate to center of proximity switch when A=0

Shaded areas indicate surrounding metal other than the target object.

| Catalog listing | A(mm) | B(mm) | C(mm) |
|-----------------|-------|-------|-------|
| FL7M-2_6A       | 0     | 6     | 9.0   |
| FL7M-4_6A       | 0     | 20    | 13.5  |
| FL7M-8_6A       | 0     | 40    | 22.5  |

#### 3. Mutual interference prevention

When mounting proximity sensors either parallel to or facing each other, mutual interference may cause the sensor to malfunction. Maintain at least the distances indicated in the figures below.

#### 4. Cautions for series or parallel connection

#### 4.1 Series connection (AND switching circuit)

When connecting two or more proximity sensors in series, erroneous output (1 to 3ms) may occur without the rated current being supplied to each of the sensors. For this reason, series connection of proximity sensors is not recommended. However, if proximity sensors must be connected in series, a resistor of  $10k\Omega$  must be put in parallel to each of the sensors. Note that the maximum leakage current in a series connection will be 3.5mA. Operation lag also will occur, resulting in increased voltage drop, and the operation indicator lamp will not light.

Operation lag = 80ms X (No. of sensors in series - 1)

Voltage drop = Voltage drop of single sensor X No. of sensors in series

#### 4.2 Parallel connection (OR switching circuit)

 If two or more proximity sensors are connected in parallel, total leakage current increases according to the following formula, and may result in the load not turning OFF.

(Leakage current = Leakage current of single sensor x No. of sensors in parallel)

When two or more sensors in parallel turn ON, one (or more) of their operating indicators may not light up. This is normal.

#### 5. Relay loads

The voltage drop of FL7M-A sensors is 3V. Pay attention to this voltage drop when using a relay load. (With 12Vdc relays, switching is not possible.)

#### 6. Operation upon power ON

After the power is turned ON, it takes at most 40ms until the proximity sensor is ready for sensing. If the load and the proximity sensor use different power supplies, be sure to turn the proximity sensor ON before turning the load ON.

#### 7. Influence of leakage current

A minimal current flows as leakage current for operating the circuits even when the proximity sensor is OFF. Keep this in mind when turning off connected loads.

#### 8. Minimum cable bend radius (R)

The minimum bend radius (R) of the cable is 3 times the cable diameter. Take care not to bend the cable beyond this radius. Also, do not excessively bend the cable within 30mm of the cable lead-in port.

#### 9. ALUMINUM CHIPS AND CAST IRON CHIPS

Generally, even if aluminum and cast iron chips are attached to or pressing against the sensing face, no signal is output. Take care, however, because under the conditions described below, a signal may sometimes be output.

| Length of one side of aluminum chip | FL7M-2J6AD |
|-------------------------------------|------------|
| 0.1mm max.                          | OFF        |
| 0.5mm approx                        | OFF        |
| 2mm max.                            | OFF or ON  |
| 4mm min.                            | ON         |

### 9.2 FL7M-4 6A, FL7M-8 6A

(1) Chip size (d) x size of sensing face (D)

| Dimensions            | D(mm)    |
|-----------------------|----------|
| Catalog listing       | D(IIIII) |
| FL7M-4J6AD, FL7M-4K6A | 16       |
| FL7M-8J6AD, FL7M-8K6A | 28       |

(2) When chips are pressed against sensing face
