

DIRTY COOLANT?

Fixed Intake Unit, Part # C-3002-15

Remove Unwanted Tramp Oil With **COOLANT CLEANING SYSTEMS**

Coolant cleaning systems by Fluid Service Technologies drastically improve the lifespan of your machine through continual circulating coolant rotation. The combination of a floating skimmer head and a coalescing cartridge moves tramp oil from the machine sump into the barrel reducing sump smell and bacterial growth, all while limiting the amount of coolant removal. Circulation of coolant through the filter mechanisms will result in less waste oil, less down time, and substantial cost savings.

BENEFITS

- Easy to use and install
- Little maintenance required
- Keeps coolant clean/circulating
- Keeps machine cleaner
- Removes tramp oil 24/7
- Extends coolant sump life
- Reduces down time
- No messy drip pans
- No replacement filters
- Keeps coolant aerated
- No stagnant sump odors
- Reduces bacterial growth
