NITTA MOORE

Hoses, Hose couplings & Adaptors

Linemate®

CATA-10010A-04E

http://www.nittamoore.co.jp

CAD diagrams can be downloaded from our web site

Nitta Moore Company has received ISO14001 and ISO9001 certifications.

Features of Nitta Moore thermoplastic hoses

Clean and Eco-friendly

Smooth inner surface of the plastic hoses keeps the operating oil clean.

Piping on Site

With the one-touch coupling “CAMPUCKA” or assembly tool “Mark 10,” it is easy to adjust length on site.

High Durability

They are highly durable against impact pressure and repeated bending, because of the synthetic fiber reinforcement.

High Abrasion Resistance

They have high abrasion resistance because special polyurethane resin is used as the cover material.

Light

They weigh only about a quarter to half that of rubber hoses.

Compact Piping

Small outer diameter enables piping in small bending radius.

CAD diagrams of hose couplings and adaptors can be downloaded from our web site.

http://www.nittamoore.co.jp

INDEX

⚠Precautions for Use

These “Precautions for Use” provide instructions for the correct use of our product to prevent damage to people and property. The instructions are classified into three categories, “danger,” “warning,” and “caution,” depending on the extent of damage from improper use. Every category contains important notes for safety so please follow these as well as ISO 4414-1982 (*1), JIS B 8370(1988)(*2), ISO4413-1979(*3), and JIS B 8361(1982)(*4).

*1 ISO4414-1982 Pneumatic fluid power ····· Recommendations for the application of equipment to transmission and control systems.
*2 JIS B 8370(1988) Pneumatic System General Rules
*3 ISO4413-1979 Hydraulic fluid power ····· General rules for the application of equipment to transmission and control systems.
*4 JIS B 8361(1982) Hydraulic System General Rules

⚠ DANGER For the limited cases of inappropriate use, where a dangerous situation leading to death or severe injury is expected and emergent warning is necessary at the occurrence of danger.

⚠ WARNING For the cases of inappropriate use, where a dangerous situation leading to death or severe injury is expected.

⚠ CAUTION For the cases of inappropriate use, where a dangerous situation leading to minor injury or light damage to property is expected.

For more safety information, please read the following carefully. Notes for each product are also given on the product page. Please read the instructions for use as well.

Notes for the products in this catalog

Notes for the use of Assembling machines Mark 9 and 10 are also given in their instruction manual.

⚠Before Selection!

⚠DANGER

- Cannot use for machines and equipment that maintain and control human life.
- Cannot use for machines and equipment that require an extremely high level of safety.

⚠WARNING

- Designers of instruments, machines, or connecting systems or those who make specifications should consider the handling of our products. In such consideration, a test or analysis should be conducted if necessary. It is their responsibility to assure the given safety and performance of the instruments, the machines, or the systems.
- Those who have sufficient knowledge and experience should handle our products.
- Please do not handle and remove our products from instruments, machines, or systems until safety is confirmed.
- Please contact us when using our products in situations and conditions that are not assumed in the specifications described in the catalog.
- Please contact us when using our products for equipment, machines, various types of vehicles, and commercial aircraft, for leisure machines and equipment to transport humans, for medical equipment that would cause human damage if the specifications were inappropriately followed, and for machines in contact with food or drinking water.

⚠When Selecting!

⚠WARNING

- Please check if the use condition satisfies the “use conditions” in the catalog.
- Do not use our products when a caustic or flammable gas is used as a fluid or is in the environment.
- Do not use our products in places where excessive vibration or impact may occur.
- Consult the “Table of chemical resistance” if chemicals are used as a fluid or in the environment.
- There are a limited group of hose couplings for each type of hose product. Please select correct combinations according to the specifications.
- Our hose products and hose couplings are not compatible with other company’s hose products and hose connectors.
- Each type of hose product allows the use of a limited type of fluid. Do not use a fluid that is not allowed.
- If use conditions are different between hose products and hose couplings, please use them following the smaller data.
- The hose product must be of an appropriate size to maintain the necessary flow volume. If the size is not appropriate, the increase in pressure drop and oil temperature could cause problems. The relation of fluid velocity, fluid volume, and hose inner diameter is given in “Nomograph.”
- The maximum impact pressure of hose products is approximately 1.5 times higher than the maximum working pressure. Since the impact pressure may affect hose life, please select appropriate hoses when the pressure exceeds the specified value.
- When electric insulation is necessary, for example in electrical works, please select “Nonconductive” hoses. Contact us for details.

⚠CAUTION

- When water or glycol-type operating oil is used, hoses work without problem but some plated types of hose couplings cannot be used. Contact us for details.
- Hose products might change their length by ±3% under pressure, so do not stretch hoses tightly.

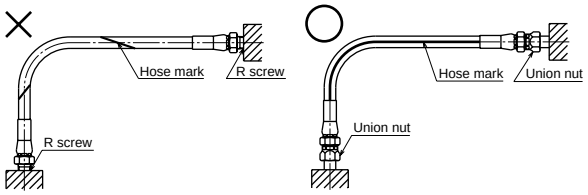
⚠When Installing!

⚠WARNING

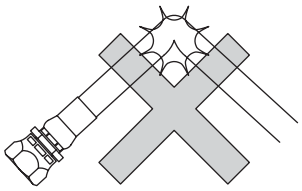
- Instructions for connecting hoses are given in a separate document. Please read it and follow the instructions for installation.
- Do not use couplings with damaged threads and seat surface.
- If you use reusable products such as reusable couplings, ensure that they are not damaged.
- We will not guarantee the products which are additionally treated, decomposed or refabricated by others .
- For installation of hoses, please fix them in a place where unexpected disconnection of hose and couplings cannot cause damage to people or property.

⚠CAUTION

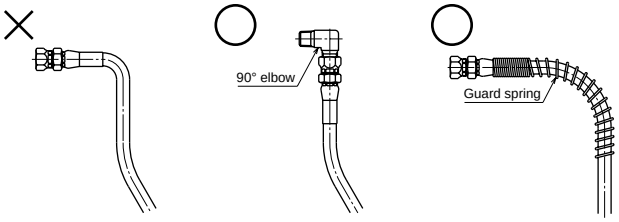
- Prevent damaging the hoses, e.g. entanglement or abrasion. It could cause flattening, destruction, and disconnection.
- Install hoses to prevent loads such as tension, torsion, rotation, and bending with a radius under the minimum bending radius.



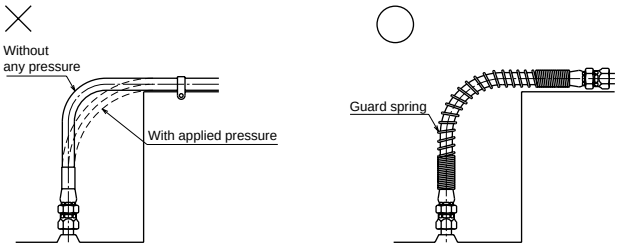
- Do not break a hose, which might cause “fatigue destruction” at the break point even under the maximum working pressure.



- When the plug-in part of the hose couplings is dirty, clean the surface.
- Do not use hoses if they have a dent or damage.
- Do not twist hose assemblies after pressure is applied. When they are twisted, it could deform the inner structure of the hoses and result in “destruction.”
- Do not throw and drop hose couplings, which might damage threads and sheets and lead to oil leakage.
- Tighten the hose coupling to the specified torque. Some material may expand or crack by the tightening, so check and confirm the strength of the part to be assembled. Sharply bending a hose near the coupling could shorten the life of the hose. When bending a hose, keep the hose straight of the length longer than the outer diameter of the hose from the asembed part.



- Pressure on hose products could cause interference with surrounding parts on which no interference exists before the pressure is applied. Please handle appropriately, e.g. introducing guard parts.
- Do not over-tighten when using clamps such as INSULOK ties to fix a hose. Concentrated stress may cause “fatigue destruction.”



- Hose products are designed to withstand inner pressure, so do not apply outer pressure to them.
- You cannot reuse hoses and hose couplings except reusable couplings.
- Protect a hose from possible outer damage by using a wire braid or guard spring.
- Hoses keep the bending shape if they are left over a certain period of time. When removing and reinstalling a hose assembly for machine exchange, circuit inspection, repair, and so forth, please attach the hose in the original position. When attaching it, clean the threads and seat of the coupling and tighten it to the specified torque.

⚠ When Using!

⚠ WARNING

- Do not touch hose products at the pressurization. If you improperly approach or touch a hose at the pressurization, it could be quite dangerous if an unexpected breakage of the hose or the coupling were to scatter fluid inside.
- Do not touch hose products when the fluid is hot. It could cause a “burn.”
- When “water” is used as a fluid, please keep it unfrozen.

⚠ When Storing!

⚠ CAUTION

- If you store unused products, keep them in a clean place to prevent dust. When fine particles such as dust enter the inside, they also enter the connecting equipment and may cause problems.
- Keep hose products in a dry place under 40°C avoiding direct sunlight.
- Store a hose in a straight position or in a coil with a larger diameter than the minimum bending diameter.
- Ty to use hoses and couplings within about one year after the production.

⚠ When Maintaining!

⚠ CAUTION

- Please conduct periodic inspection. Confirm that there is no degradation such as outer damage, corrosion, and abrasion as well as any distorted parts and replace it with a new one if necessary.
- Change the hose immeiately if the outer damage or abrasion reaches, or is about to reach the synthetic fiber braid.

Hose products

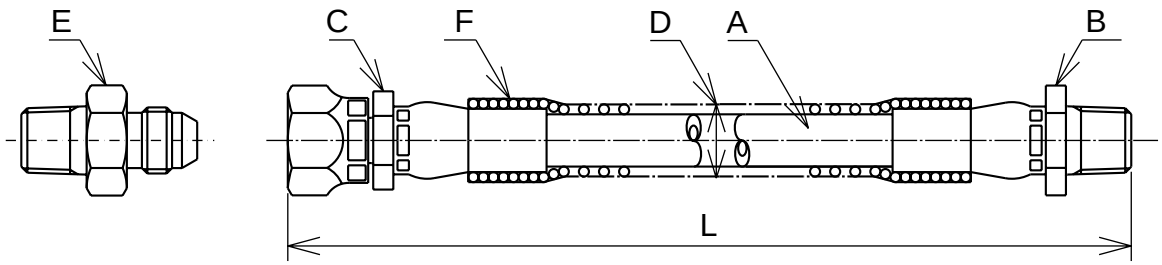
How to order

Check the following usage conditions before ordering.

1. Type and volume of working fluid
2. Working pressure (maximum working pressure and maximum impact pressure: MPa)
3. Working temperature range (temperature of fluid and environment: °C)
4. Bending radius of hose (minimum bending radius: mm)

Based on the above conditions, please follow the steps below.

1. Select the type of hose (A) and the inner diameter (D).
2. Indicate the length (L) of hose assembly. (Use the length between the edges of two couplings.)
3. Select types and materials of couplings (B and C) and adaptor (E).
4. Specify if guard spring and other accessories (F) are required. See P.67 for accessories.



N3130−04 1000L SA×SE+010−G1

A Type of hose
D Inner diameter of hose
L Length of hose assembly
B Type of one coupling

F Fitting shape of guard parts
(Ex) Below are the types of guard springs
G1: Full length
G2: Both ends (Please specify the length)
G3: Single end (Please specify the length and the direction of installation)

E Types of adaptor
C Types of the other couplings

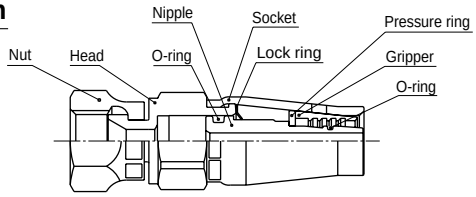
Push-one type

Campucka

The Campucka coupling enables push-one connection in the hose-coupling assembling
Without any swaging machine, the on-site assembling can be performed easily without fail.

Cross-sectional structure diagram



Assembling method
P.73

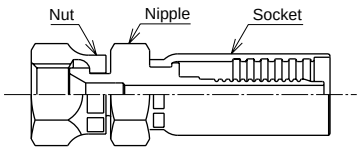
Swaging type

Swage

The swage coupling is attached to the hose by swaging.
The coupling and the hose can be easily swaged (assembled) with a manual assembling tool [Mark10], or a hydraulic assembling machine [Mark9].

☞ Some couplers and hoses have to be assembled in our factory.

Cross-sectional structure diagram



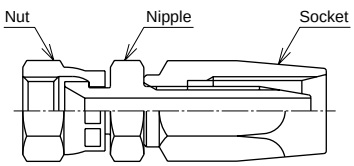
Assembling method
P.75

Compression type

Reusable

The reusable coupling is used to screw in a hose. On-site assembling is possible and the detached coupling is reusable

Cross-sectional structure diagram



Assembling method
P.81

☞ The mark ⋆ at the part number of the union bend indicates the angle and select 45° or 90°.

[Functional coupling shape]

Coupling with a simple one-touch connection system

SJ (Swage)

Made-to-order
Contact us for details

FEATURES

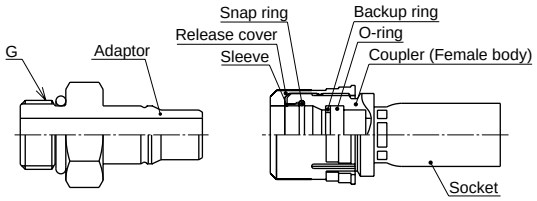
One-touch connection between hose coupling and adaptor

- Drastic reduction of piping operation time (by 87% in our case)
- Easy piping in a narrow space (enabling compact designs of equipment)
- Operation tools, such as torque wrench, are unnecessary. (Operation reliability improves without torque control.)

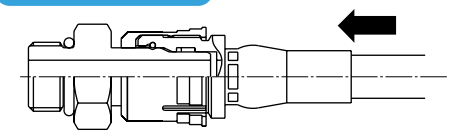
Maximum working pressure: 7.0MPa

Structure

Before connection



After connection



Swivel coupling with parallel male-thread O-ring port

AWO (Swage)

Made-to-order
Contact us for details

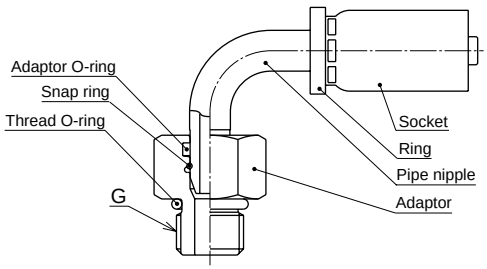
FEATURES

Single operation accomplishes tightening screw when piping, because no adaptor is needed.

- Low profile is possible because of no adaptor.
- Swivel allows direction change after the piping.
- Swivel relaxes hose twisting.

Working temperature range: –25 to 100°C
Maximum working pressure: 10.5MPa

Structure



Coupling with steel-pipe bite function

SB (Swage)

Made-to-order
Contact us for details

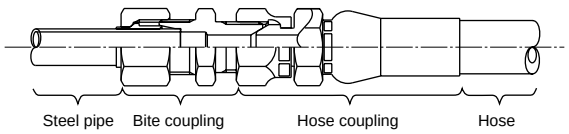
FEATURES

This single coupling connects a steel pipe and hose.

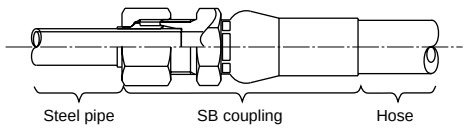
- Reduction of operation time
- Improvement of leakage reliability due to reduction of the number of connections.
- Maintenance cost can be cut because the intermediate connections are not necessary.
- Downsized connection part
- Total cost cut of connection part
- Realization of high reliability of bite couplings through collaboration with Ihara Science Corporation.

Comparison with the conventional connection method

Conventional connection method (bite coupling + hose coupling)



SB coupling



Integration of Q.D.C. and hose coupling

SQ (Swage)

Made-to-order
Contact us for details

FEATURES

Integration of Q.D.C. and hose coupling saves space

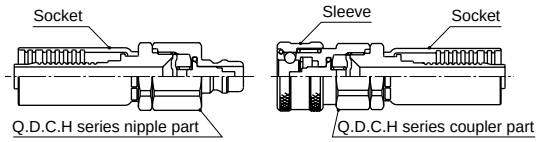
- **Reduction of operation time when piping**
- **Space-saving**

Working temperature range: –30 to 93°C

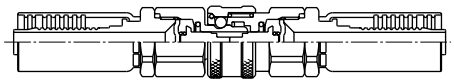
☞ It is possible to use the coupler or nipple side in combination with Q.D.C.

Structure

Before connection



After connection



LF70 Series

LF70

Features

- **Improved flexibility by 15-25% (compared to our other equivalent types)**
- **Short total length of coupling enables compact piping.**

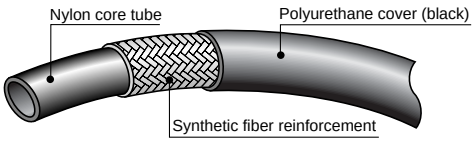
1000·1100·1400·1500 Series

1000

Features

- Small outer diameter
- Light
- Campucka coupling can be used



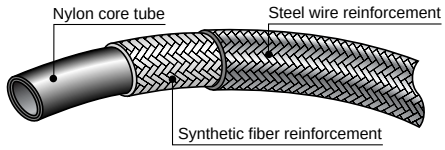
Part No.	Size				Max. working press. (MPa)	Max. impact press. (MPa)	Min. destruction press. (MPa)	Min. bending radius (mm)	Weight (g/m)	Coupling
	Size No.	I.D. (in.)	I.D. (mm)	O.D. (mm)						
1000-04	04	1/4	6.3	10.4	10.5	13.2	42.0	40	64	Campucka Swage
1000-06	06	3/8	9.5	14.0	10.5	13.2	42.0	60	90	
1000-08	08	1/2	12.7	17.4	10.5	13.2	42.0	80	131	

- Appropriate fluid: mineral general operating oil
- Working temperature range: –40 to +100°C
- Length in a unit package: 100m

1100

Features

- Outer wire reinforcement prevents the cutting powder



Part No.	Size				Max. working press. (MPa)	Max. impact press. (MPa)	Min. destruction press. (MPa)	Min. bending radius (mm)	Weight (g/m)	Coupling
	Size No.	I.D. (in.)	I.D. (mm)	O.D. (mm)

- Length in a unit package: 100m

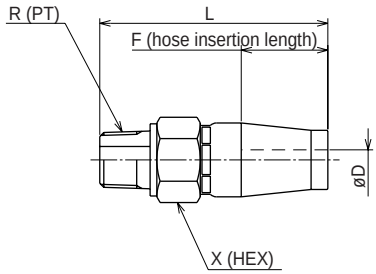
[Campucka] Hydraulic push-one coupling (For 1000, 1400)

CA

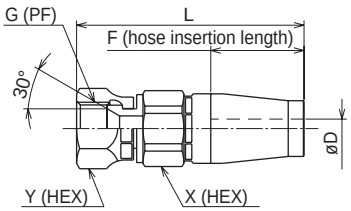


Part No.	R	Min. I.D. øD	F	L	X	Weight (g)
CA-R-04-14L	1/4	3.5	26.0	60	19	70
CA-R-06-14L	3/8	6.0	29.0	68	22	100
CA-R-08-14L	1/2	9.0	35.0	77	27	170

⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.

- Material: steel
- Surface finishing: zinc electro-galvanized with color chromating (Ep-Fe/Zn 5/CM2)
- Working temperature range: –20 to +100°C
- Adaptor: 030, 130

CE

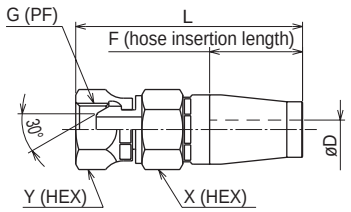


Part No.	G	Min. I.D. øD	F	L	X	Y	Weight (g)
CE-G-04-14L	1/4	3.5	26.0	64	19	19	85
CE-G-06-14L	3/8	6.0	29.0	72	22	22	115
CE-G-08-14L	1/2	9.0	35.0	83	27	27	205

⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.

- Material: steel
- Surface finishing: zinc electro-galvanized with color chromating (Ep-Fe/Zn 5/CM2)
- Working temperature range: –20 to +100°C
- Adaptor: 010, 045, 090, 150, 020, 025, 064, 069, 030, D70, D74, D79

CF



Part No.	G	Min. I.D. øD	F	L	X	Y	Weight (g)
CF-G-04-14L	1/4	3.5	26.0	64	19	19	85
CF-G-06-14L	3/8	6.0	29.0	72	22	22	115
CF-G-08-14L	1/2	9.0	35.0	83	27	27	205

⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.

- Material: steel
- Surface finishing: zinc electro-galvanized with color chromating (Ep-Fe/Zn 5/CM2)
- Working temperature range: –20 to +100°C
- Adaptor: 110, 145, 190, 130, C70, C74, C79

Features of Campucka and assembly mechanism

Assembling method P.73

1. Push-one connection

- Reduction of operation time (half that of our conventional product)
- Specialized swaging tool is not necessary. (Easy handling)
- Best for on-site length adjustment.
- Convenient for emergency repair.

2. Detachable hose

- Hose is detachable for length adjustment when piping.
- Detachable tool is available.

⚠Caution: Cannot be detached after pressurization.

3. Correcting hose's twisted direction

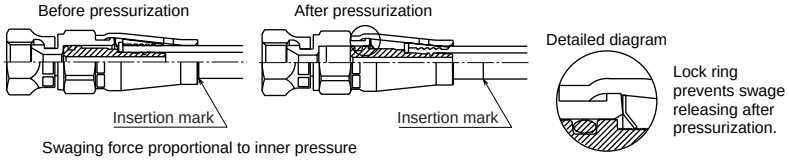
- It is possible to correct the twisted direction of a hose.

⚠ Caution: Cannot be detached after pressurization.

4. Nipple stop mechanism

- Ratchet mechanism of our original lock ring is employed.
- Steady performance even for movable piping.
- Pressure variation is accommodated.

Campucka assembly mechanism



⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.

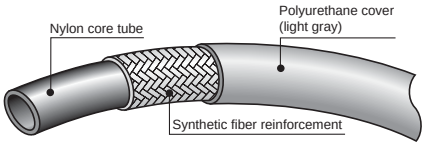
- **Slim, light**
- **Campucka compatible**



Part No.	Size				Max. working press. (MPa)	Max. impact press. (MPa)	Min. destruction press. (MPa)	Min. bending radius (mm)	Weight (g/m)	Coupling
	Size No.	I.D.		O.D. (mm)						
		(in.)	(mm)							
1000-04-LGY	04	1/4	6.3	10.4	10.5	13.2	42.0	40	64	Campucka Swage
1000-06-LGY	06	3/8	9.5	14.0	10.5	13.2	42.0	60	90	
1000-08-LGY	08	1/2	12.7	17.4	10.5	13.2	42.0	80	131	

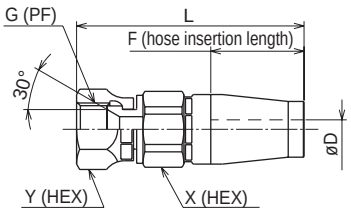
⚠ Caution: If you use Campucka, the maximum working pressure for Campucka must be applied.
- Appropriate fluid: mineral general operating oil
- Working temperature range: –40 to +100°C

☞ If you use Campucka, the working temperature range for Campucka must be applied.
- Length in a unit package: 100m

☞ Suitable hose coupling is the same as that for the 1000 series.
☞ Color code (-LGY) is appended to part Nos. "LGY" stands for light gray.

[Campucka] Hydraulic push-in coupling (For 1000 (light gray))

CE



Part No.	G	Min. I.D. øD	F	L	X	Y	Weight (g)
CE-G-04-14L	1/4	3.5	26.0	64	19	19	85
CE-G-06-14L	3/8	6.0	29.0	72	22	22	115
CE-G-08-14L	1/2	9.0	35.0	83	27	27	205

⚠Caution: If you use Campucka, the maximum working pressure for Campucka must be applied.
⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.

- Material: steel
- Surface finishing: zinc electro-galvanized with color chromating (Ep-Fe/Zn 5/CM2)
- Maximum working pressure: 10.5MPa
- Working temperature range: –20 to +100°C
- Adaptor: 110, 145, 190, 130, C70, C74, C79

Features of Campucka and assembly mechanism

Assembling method P.73

1. Push-one connection
- Reduction of operation time (half that of our conventional product)
- Specialized swaging tool is not necessary. (Easy handling)
- Best for on-site length adjustment.
- Convenient for emergency repair.

2. Detachable hose
- Hose is detachable for length adjustment when piping.
- Detachable tool is available.

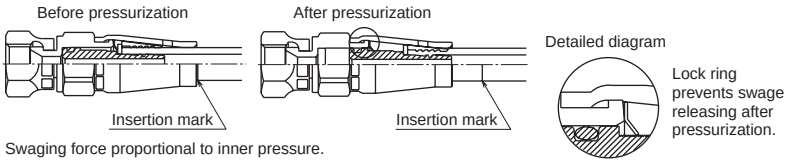
⚠Caution: Cannot be detached after pressurization.

3. Correcting hose's twisted direction
- It is possible to correct the twisted direction of a hose.

⚠ Caution: Cannot be detached after pressurization.

4. Nipple stop mechanism
- Ratchet mechanism of our original lock ring is employed.
- Steady performance even for movable piping.
- Pressure variation is accommodated.

Campucka assembly mechanism



⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.

- Length in a package: 100 m for sizes 03, 04, 06, 08 and 50 m for sizes 12,16

The * mark above indicates that the outer wire braid type is available (made-to-order). Contact us for details.

Nonconductive hose

When electrical insulation is particularly necessary, e.g. for the hydraulic hose of electrical work equipment, a nonconductive hose without pin pricking (no pin hole for gas venting) is useful to prevent the reduction of electrical insulation due to external water invasion.

☞Contact us if the leakage of electrical current should be controlled.

3700 Series (for low temperature environment)

3700

Features

- **High flexibility and steady performance under low temperature environment (–55°C).**
- **JIS K 6375 A certificated, SAE 100R7 certificated.**

	Part No.	Size			O.D. (mm)	Max. working press. (MPa)	Max. impact press. (MPa)	Min. destruction press. (MPa)	Min. bending radius (mm)	Weight (g/m)	Coupling

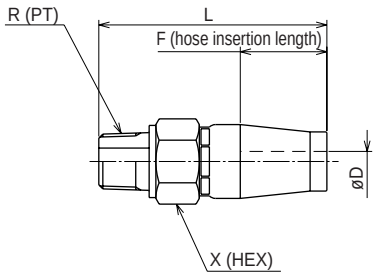
[Campucka] Hydraulic push-one coupling (For N3130, 3130, 3000) (For 3700)

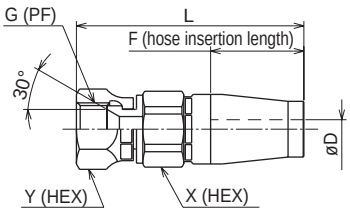
CA



Part No.	Size No.	R	Min. I.D. øD	F	L	X	Weight (g)
CA-R-02L	02	1/8	1.5	22.5	56	14	36

⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.
- Material: steel
- Surface finishing: zinc electro-galvanized with color chromating (Ep-Fe/Zn 5/CM2)
- Working temperature range: 20.0MPa
- Working temperature range: –20 to +100°C
- Adaptor: 030, 130

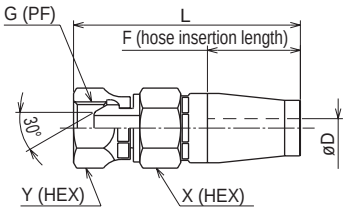
CE



Part No.	Size No.	G	Min. I.D. øD	F	L	X	Y	Weight (g)
CE-G-02L	02	1/8	1.5	22.5	62	14	14	44

⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.
- Material: steel
- Surface finishing: zinc electro-galvanized with color chromating (Ep-Fe/Zn 5/CM2)
- Working temperature range: 20.0MPa
- Working temperature range: –20 to +100°C
- Adaptor: 010, 045, 090, 150, 030

CF



Part No.	Size No.	G	Min. I.D. øD	F	L	X	Y	Weight (g)
CF-G-02L	02	1/8	1.5	22.5	62	14	14	45

⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.
- Material: steel
- Surface finishing: zinc electro-galvanized with color chromating (Ep-Fe/Zn 5/CM2)
- Working temperature range: 20.0MPa
- Working temperature range: –20 to +100°C
- Suitable adaptor: 110, 145, 190, 130

Features of Campucka and assembly mechanism

Assembling method P.73

1. Push-one connection
- Reduction of operation time (half that of our conventional product)
- Specialized swaging tool is not necessary. (Easy handling)
- Best for on-site length adjustment.
- Convenient for emergency repair.

2. Detachable hose
- Hose is detachable for length adjustment when piping.
- Detachable tool is available.

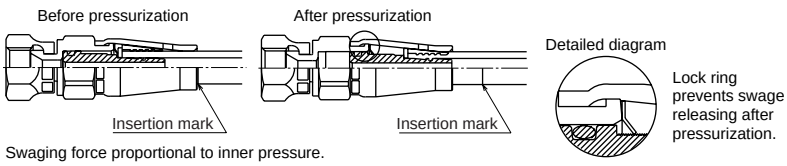
⚠Caution: Cannot be detached after pressurization.

3. Correcting hose's twisted direction
- It is possible to correct the twisted direction of a hose.

⚠ Caution: Cannot be detached after pressurization.

4. Nipple stop mechanism
- Ratchet mechanism of our original lock ring is employed.
- Steady performance even for movable piping.
- Pressure variation is accommodated.

Campucka assembly mechanism



Swaging force proportional to inner pressure.

⚠Caution: Handle with care not to drop couplings as an inner nipple could be self locked by pushing-out action to inlet of coupling.

[Reusable] (For 3130, 3000)

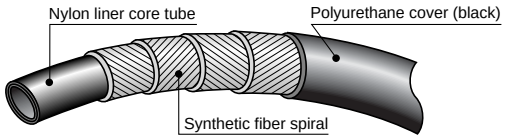
3V10·3VE0 Series

3V10

Features

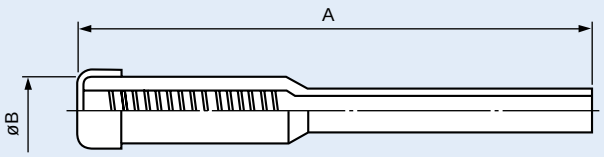
- **For super high pressure. Small bend radius and light weight.**



Part No.	Size				Max. working press. (MPa)	Min. destruction press. (MPa)	Min. bending radius (mm)	Weight (g/m)	Coupling
	Size No.	I.D.		O.D. (mm)					
		(in.)	(mm)						
3V10-03	03	3/16	4.8	13.0	68.6	274.6	40	121	Swage
3V10-04	04	1/4	6.3	15.0	68.6	274.6	65	158	
3V10-06	06	3/8	9.5	19.5	51.5	205.9	75	244	

- Appropriate fluid: mineral general operating oil
- Working temperature range: –40 to +66°C
- Assembly operation should be done at Nitta Moore factory.
- ☞ For safer use, hose guards are attached to both ends of the couplings.
- ☞ The maximum working temperature will be as high as +90°C with the couplings of SF-PF3/8-03-3V.

The black hose guard for 3V10 and 3VE0 (for general purpose)

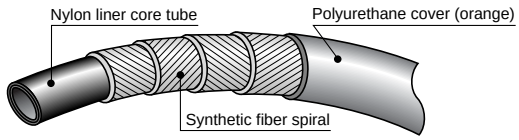


Part No.	A	B	Weight (g)
HGS-03B	215	28.0	125
HGS-04B	300	30.0	180
HGS-06B	300	34.5	250

3VE0 Nonconductive hose

Features

- **For super high pressure. Small bend radius and light weight.**
- **High electrical insulation**



Part No.	Size				Max. working press. (MPa)	Min. destruction press. (MPa)	Min. bending radius (mm)	Weight (g/m)	Coupling
	Size No.	I.D.		O.D. (mm)					
		(in.)	(mm)

3VE0-06-OR	06	3/8	9.5	19.5	51.5	205.9	75	244	

- Appropriate fluid: mineral general operating oil
- Working temperature range: –40 to +66°C
- Assembly operation should be done at Nitta Moore factory.
- ☞ For safer use, hose guards are attached to both ends of the couplings.
- ☞ The maximum working temperature will be as high as +90°C with the couplings of SA-PT2/8-03-3V and SF-PF3/8-03-3V.
- ☞ "-OR" stands for orange.

Nonconductive hose

When electrical insulation is particularly necessary, e.g. for an electrical work equipment, a nonconductive hose without pin pricking (no pin hole for gas venting) is useful to prevent the reduction of electrical insulation due to external water invasion.

☞ Contact us if electrical leakage current is determined.

The orange-colored hose guard for 3VE0 (for 20 kV voltage proof)

Adaptor Products

How to assemble
P.89

Specification

Material: Steel (Zinc electrogalvanized with color chromating. Ep-Fe/Zn5/CM2), SUS304, SUS316

Usage conditions

Appropriate fluid: Mineral hydraulic oil

Maximum working pressure: It changes with the size of G- and R-threads, and when different sizes exist in one product, the larger one is to be counted.
(taper thread type to the equipment side or interconnection type)
02 to 08 : 35.0MPa
12 : 27.5MPa
16 : 20.5MPa
(parallel thread type to the equipment side)
04 to 12 : 21.0MPa
16 : 10.5MPa

Working temperature range: (Taper thread type to the equipment side or interconnection type to the equipment)
-55°C to +120°C
(Parallel thread type to the equipment side)
-30°C to +100°C

Example of part number

010 - 04 - 04 -(S)

- (S): Material [Steel (Electrogalvanized with colored chromate treatment Ep-Fe/Zn5/CM2)]
- 04: Size of R(PT) or G(PF) (02=1/8", 04=1/4", 06=3/8", 08=1/2", 12=3/4", 16=1")
- 04: Size of G(PF) thread (02=1/8", 04=1/4", 06=3/8", 08=1/2", 12=3/4", 16=1")
- 010: Adaptor shape (see the next page)

Hose couplings: SE, SLE, SE45, SE90, AE45, AE90, CE, E

Hose Guard Parts and Specially-Treated items

Double hoses and triple hoses

Made-to-order

● Two hoses can be adhered together.

If you use double hoses,

❍ the piping space can be made compact.
❍ a single reel pulley suffices.
❍ hose flopping at pressurization can be minimized.

☞ Adhesion of more than three hoses or adhesion with tubes is also possible. Contact us for details.

Nonconductive (electric insulating) processing

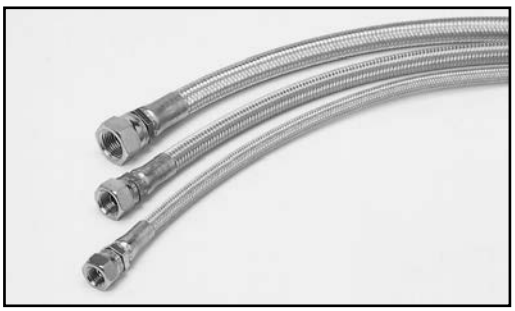
Made-to-order

Although plastic hoses are generally electrically insulated, sometimes leakage current is regulated for hydraulic hoses of electrical work equipment or for the hoses that are especially required to be insulated. When electrical insulation is required, we can make a hose cover with no pin-pricking processing (no pin hole processing for gas venting) in order to prevent the reduction of electrical insulation due to external water invasion.

☞ Contact us for details.

Outer braid processing

Made-to-order



● Processing of steel wire braid and stainless wire braid is possible.

❍ Guarding hose against powderly metal.
❍ Maintaining electric conductivity
❍ Guarding hose against damage

(Hoses that can be processed)

N3130 series	all sizes
3130 series	all sizes
3000 series	all sizes
3700 series	sizes 03, 04, 06 and 08
N3000 series	sizes 06 and 08
3R80 series	sizes 04, 06, 08 and 12

☞ Contact us for details.

Colored hose

Made-to-order

● Hose cover can be colored.

❍ Coloring hoses (blue, red, gray, green, aqua color, etc)

☞ Contact us for details.

Hose guard parts

Hose guard parts attached

① Covering whole hose
G1, S1, E1, P1, C1

The whole hose is covered.

② Covering both ends
G2, S2, E2, P2, C2

Both ends of the coupling are covered
Please specify the length.

③ Covering single end
G3, S3, E3, P3, C3

One end of the coupling is covered.
Please specify the length and direction.

☞ For more details, see "How to order horse assembly" on page 6.

Guard spring

Material: steel (Ep-Fe/Zn 5/CM2)

☞ • Expand the spring 2-2.5 times the original length when in use
• Attach the spring by screwing over the coupling socket with the hand.
• The spring can also be made of SUS304 or SUS316 , please consult us if you need them.

Features

• It prevents kinks and flattening of the hose.
• It prevents abrasion and damage to the hose.

Working temperature range

Same as the working temperature range of the hose.

Part number

G1: For whole hose G2: For both ends G3: For single end

☞ Specify the length for G2 and G3.

For single part order

☞ Contact us.

Unit length: 1.7 m in contracted state

For LF70 series

Part No.	Hose size	Spring O.D. (mm)	Spring wire diameter (mm)
YM07-04-1700L-MCH	04	15.3	1.6
YM07-06-1700L-MCH	06	19.1	2.0

For 1000, 1400, 1500 series

Part No.	Hose size	Spring O.D. (mm)	Spring wire diameter (mm)
YM10-03-1700L-MCH	03	12.9	1.4
YM10-04-1700L-MCH	04	15.8	1.6
YM10-06-1700L-MCH	06	19.6	2.0
YM10-08-1700L-MCH	08	23.0	2.0

For 1100 series

Part No.	Hose size	Spring O.D. (mm)	Spring wire diameter (mm)
YM11-04-1700L-MCH	04	15.8	1.6
YM11-06-1700L-MCH	06	19.6	2.0
YM11-08-1700L-MCH	08	23.7	2.0

For N3130, 3130, 3700, 3000, 34PW (04,06,08) series

Part No.	Hose size	Spring O.D. (mm)	Spring wire diameter (mm)
YMS-02-1700L-MCH	02	11.6	1.4
YMS-03-1700L-MCH	03	15.4	1.6
YMS-04-1700L-MCH	04	18.2	2.0
YMS-05-1700L-MCH	05	19.6	2.0
YMS-06-1700L-MCH	06	21.2	2.0
YMS-08-1700L-MCH	08	25.1	2.0
YMS-12-1700L-MCH	12	32.7	2.6
YMS-16-1700L-MCH	16	39.1	2.6

For N3000, HT series

Part number	Hose size	Spring O.D. (mm)	Spring wire diameter (mm)
YMS-04-1700L-MCH	04	18.2	2.0
YMSN-06-1700L-MCH	06	22.4	2.0
YMSN-08-1700L-MCH	08	26.2	2.0
YMSN-10-1700L-MCH	10	31.7	2.6

For 3R80, 34PW (12,16) series

Part number	Suitable hose size	Spring outer diameter (mm)	Spring wire diameter (mm)
YMSH-03-1700L-MCH	03	17.3	2.0
YMSH-04-1700L-MCH	04	20.5	2.0
YMSH-06-1700L-MCH	06	23.7	2.0
YMSH-08-1700L-MCH	08	28.1	2.6
YMSH-12-1700L-MCH	12	35.6	2.9
YMSH-16-1700L-MCH	16	43.2	2.9

Nylon spiral tube

Material: nylon

☞ Polyethylene spiral tube is also available.
Contact us for details.

Color: black

Features
- It prevents abrasion and damage to the hose.
- Light
- It can be attached after piping.
- For binding hoses
- Excellent chemical durability

Working temperature range
(nylon) -40°C to +105°C
(polyethylene) -40°C to +85℃

Part number
S1: For whole hose S2: For both ends S3: For single end
☞ Specify the length for S2 and S3.

For single part order
☞ Contact us.
Unit length: SPN-06-0 100M
SPN-11-0, SPN-18-0 50M

Part No.	Outer x inner diameters (mm)	Thickness (mm)	Pitch (mm)	Recommended hose size
SPN-06-0-100M	5.5 x 4	0.75	10	02 to 04
SPN-11-0-50M	10.6 x 9	0.8	12	03 to 08
SPN-18-0-50M	16.6 x 15	0.8	18	08 to 16

Heat contraction tube

Material: EPR
Color: black

Features
- As an insulator from outside.
- For binding multiple hoses.
- For preventing abrasion and damage to the hose.

Working temperature range
-50°C to +80°C

Part number
E1: For whole hose E2: For both ends E3: For single end
☞ Specify the length for E2 and E3.

For single part order
☞ Contact us.
Unit length: 5M

Part No.	Inner diameter before heat contraction (mm)	Inner diameter after heat contraction (mm)	Thickness after heat contraction (mm)
H990-NT200-5M	20	10.0	1
H990-NT250-5M	25	12.5	1
H990-NT300-5M	30	15.0	1
H990-NT400-5M	40	20.0	1

Vinyl pipe

Material: vinyl chloride
Max attachement length:
02 to 06 size: 2.5M
08 to 16 size: 1.5M

☞ Contact us for details.

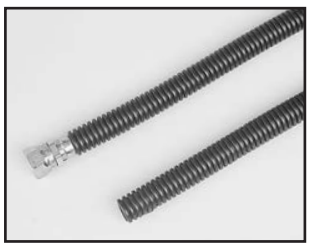
Features
- For preventing any damage from outside such as stone-hitting etc.

Working temperature range
0°C to +40°C

Part number
P1: For whole hose P2: For both ends P3: For single end
☞ Specify the length for P2 and P3.

For single part order
☞ Contact us.

Corrugated pipe



Material: Polypropylene

☞ Nylon corrugated pipe is also available.
Contact us for details.

Color: black

Features
- Light
- Flexible
- It prevents abrasion and damage to the hose.
- The attachment after hose installmet is also possible.

Working temperature range
-40°C to +95°C

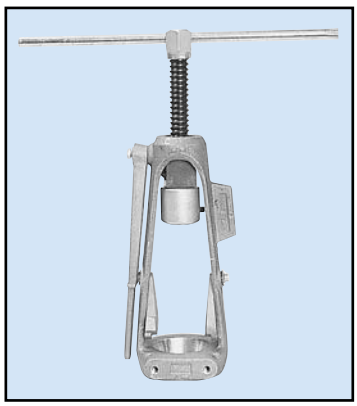
Part number
C1: For whole hose C2: For both ends C3: For single end
☞ Specify the length for C2 and C3.

For single part order
☞ Contact us.

Hose Assembly Machine Special Jigs and Tools

Although Nitta Moore plastic hoses and couplings are produced under thorough quality control, they should be correctly assembled to maximize the full potential. Please read the instructions for the use of assembling machines, tools, pushers, and dies, and assemble the hose parts with care. For details, please see the product instruction manual.

Assembling tool Mark 10



Patent No.888644

Manual tool

Features

- Light and easy to carry.
- Anywhere, anyplace, for assembling operation

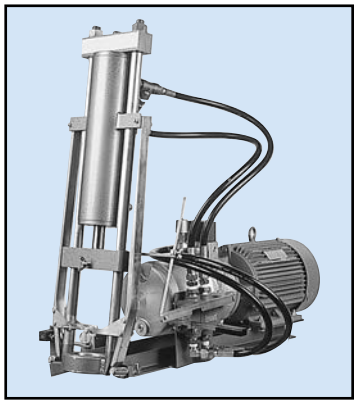
■ Specifications

Weight : 4kg
Size : W118 x L118 x H330mm
Material : aluminum die casting
Mark 10 can be used in the following three ways:
① Fixed on a vice
② Laid on the floor (with rear cushion arm and ratchet wrench HEX32)
③ Fixed on a work table by bolts

Assembling method P.75

⚠ **Caution** Since it is aluminum die casting, strong impact incurred when dropped will cause damage to the body. Please handle with care.

Assembling machine Mark 9



Hydraulic full-automatic machine

Features

- Significant reduction of the operation time
- Beneficial for assembling a large quantities.

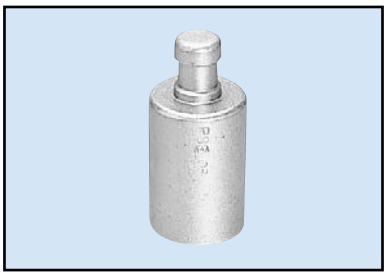
■ Specifications

Motor power : 200V, three-phase, 2.2 kw (3 horse power)
Hydraulic pump : Max pressure 14.3 MPa
Working pressure 11.2 Mpa (relief pressure already set)
Working oil : turbine oil VG46 or the equivalent
Hydraulic cylinder : double-acting special cylinder
stroke 150 mm
Weight : 90kg
Size : W520 x L820 x H800mm

Assembling method P.75

The followings are assembly jigs and tools for Mark 9 and 10.

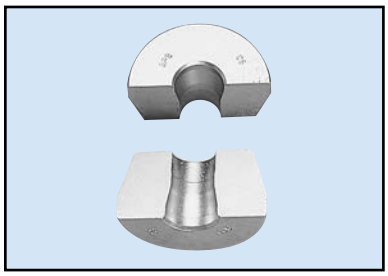
Pusher



This is a jig to fix the sleeve of the hose coupling when assembling.

List of suitable part numbers P.81

Die



This is a jig to swage the socket of the hose coupling when assembling.

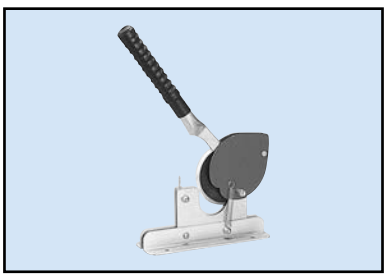
List of suitable part numbers P.81

Hand hose cutter

Part number: HC03

This can cut hoses from sizes 02 to 08.

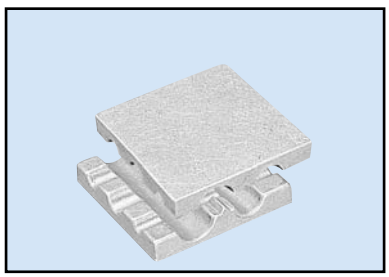
Hose cutter



Part number: HC01

This can cut all hose sizes. There are bolt holes in the base to fix the cutter.

Holding die (vice block)



Part number:

HDD1 (for 03, 04, 05, 06, 08)
HDD12 (for 08, 12, 16)

This is used to fix hoses.

Assembly lubricant

Part number:

For assembling steel connectors: PG3740 (Nihon Kohsakuyu) (lubricant color: green)
For assembling stainless connectors: CFH68 (Nisseki Mitsubishi) (lubricant color: yellow)

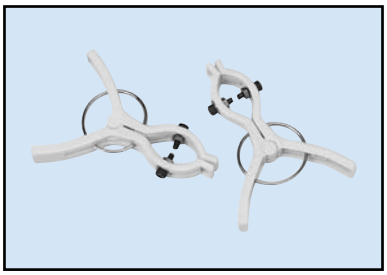
Content: 500 ml

This is used when you insert a hose into a hose connector or swage connectors with assembling tools.

⚠ Caution

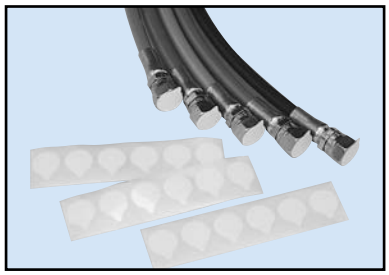
If the recommended lubricant is not applied, coating damage and/or socket buckling may occur.

Campucka coupling detachable jig



Part number: TRL

Hose coupling cap seal



☞ Contact us for details.

Hose Assembling Methods

Hose Assembling Methods

1 Preparation

Prepare appropriate hose, coupling cutter, white pen, torque wrench, seal tape, and detachable jig.

⚠Caution If the Campucka is dropped, the nipple part may detach and the hose cannot be inserted. Handle with care.

2 Attaching Campucka to equipment

Type CA
Roll seal tape onto the taper thread and connect it to the taper female thread of the equipment with proper torque.

Type CE
Attach an adaptor to the equipment and the Campucka to the adaptor with proper torque.

(proper torque) (N¥m)

Thread size	Taper thread, R thread	Parallel thread, G thread
1/8	10 to 15	15
1/4	25 to 30	25
3/8	45 to 50	34
1/2	60 to 70	59

⚠Caution More torque than recomendation may damage the coupling

⚠Caution When using a Campucka coupling, mark the hose to check the inserted length,fitting the hose edge to the groove mark of the socket.

⚠Caution The Campucka coupling can be used only for specified hoses.

Hose No.	Hose clamp position
3130-02, F3130-02	200mm or more
1000-04, 1400-04, F3130-04	350mm or more
1000-06, 1400-06, F3130-06	400mm or more
1000-08, F3130-08	500mm or more

3 Hose cutting

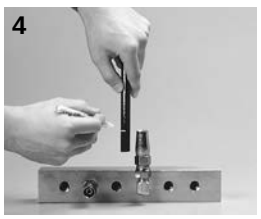
Use the specified hose cutter to cut the hose squarely

⚠Caution The slanted cut section may cause pullout of the hose and leakage.

⚠Caution If the blade is blunt, the hose cut section becomes elliptic, causing pullout of the nipple O-ring on insertion and leakage. Change the cutter in this case.

⚠Caution Do not touch the blade of the cutter.

4 Marking the insertion length of the hose



As shown in the figure, mark the hose with a white pen, fitting the hose edge to the groove mark of the socket.

5 Inserting the hose to the Campucka

Insert the hose into the coupling until it meets the marked position.
Repeat the same steps 2-5 for the other end of the Campucka.

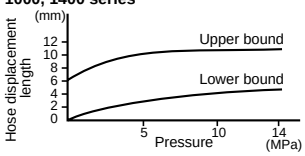
⚠Warning If the insertion is insufficient, pullout of the hose or leakage may occur.

⚠Caution If the hose is inserted in a tilted position, the inner part (gripper) may be deformed, interfering with the insertion.

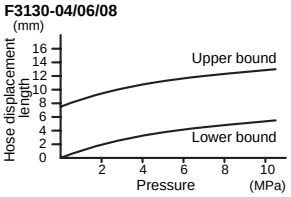
6 Completing hose assembling

Pressurization swages the hose with an appropriate force according to the pressure.

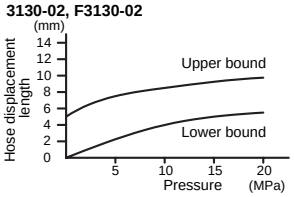
(hose displacement by the pressurization)
1000, 1400 series



F3130-04/06/08

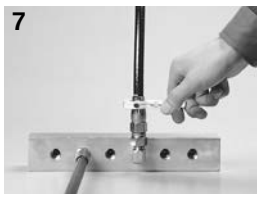


3130-02, F3130-02



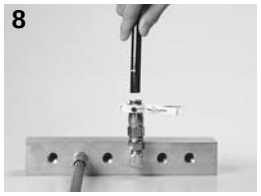
⚠Warning Since displacement by the pressurization makes the hose longer, check for interference with the equipment and kinks in the hose.

7 Detaching hose (1)



Detaching method (detachable only before pressurization) Insert the (two) edge pins of the detachable jig into the side holes of the socket.

8 Detaching hose (2)

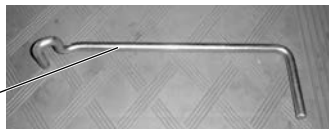


Push the hose toward the Campucka and then slowly pull it out.

⚠Caution The hose cannot be pulled out after pressurization. If it is forced, the inner part of the coupling could be damaged, causing pullout of the hose or leakage.

⚠Caution The hose and the Campucka are not reusable once pressurized.

Setup and specifications



Specifications

Weight : 4kg
Size : 118 x 118 x 330mm
Material : aluminum die casting

There are three ways to set Mark 10 as follows:

1 Fixed on vice (recommended)

Fix the rib of Mark 10 with a vice.
(In this document, we follow this way of setting.)

2 Laid on floor

Lay Mark 10 with the support of the reaction arm.

3 Fixed on the working base

Use the optional fixing bracket and fix the bracket onto the working base with bolts.

Assembling method

1 Preparation

Prepare appropriate hose, swage coupling, pusher, die, hose cutter, holding die, lubricant*, plastic hammer, scale, and white pen.

*lubricant...Steel connector : Nihon Kosakuyu PG3740
Stainless connector : Nisseki Mitsubishi CFH68

☞ A 50cc bottle of lubricant (for steel coupling) comes with a set.

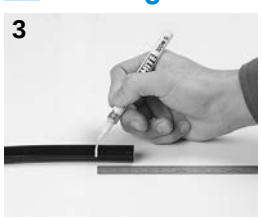
⚠ Caution If the recommended lubricant is not applied, coating damage and/or socket buckling may occur

2 Hose cutting

Determine the cutting length of the hose based on the hose assembling length and cut the hose squarely using the special hose cutter.

⚠ Caution Do not touch the blade of the cutter.
⚠ Caution The slanted cut section could cause pullout of the hose and leakage.
⚠ Caution If the blade is blunt, correct assembly is not possible. Change the hose cutter in this case.

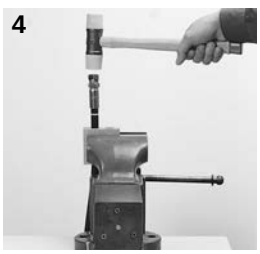
3 Marking the insertion length of the hose



Measure the insertion length of the hose with a scale and mark the hose at the insertion length with the white pen.

☞ It is recommended to draw a marking line with a width of about 2 mm in order to check it after swaging.

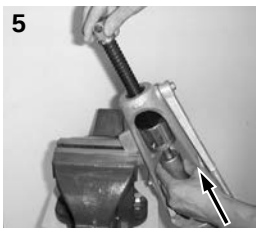
4 Preparation for the hose insertion



Apply the lubricant to the inner surface of the hose and insert the coupling to the marked position. When it is difficult, use the holding die to fix the hose and hit the coupling with the plastic hammer.

⚠ Caution If the insertion is incomplete, pullout of the hose, leakage, or damage may occur.

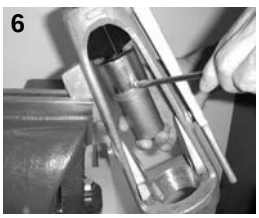
5 Fixing Mark 10



Fix the rib of Mark 10 on the vice and pull out the pressurization screw to the longest position. The die clamp should be open as shown in the figure.

⚠ Caution If you release your grip, the pusher holder will come down by its own weight. Take care not to trap your fingers.

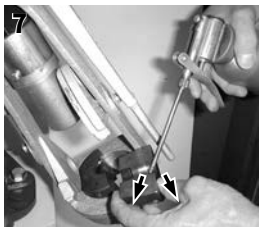
6 Attachment of pusher



Attach the pusher to the pusher holder. Fix the pusher by turning the screw of the pusher holder with the hand so that the pusher can freely rotate. Check if the pusher is really able to rotate.

⚠ Caution The wrong choice of pusher will cause pullout of the hose, leakage, or damage.

7 Application of lubricant



Apply lubricant to the inner surface of the die.

*lubricant ...Steel coupling : Nihon Kosakuyu PG3740 or equivalent

Stainless coupling: Nisseki Mitsubishi CFH68 or equivalent

⚠ **Caution** If the recommended lubricant is not applied, coating damage and/or socket buckling may occur.

8 Fixing a mate of the die

Fix a mate of the die onto the tapered base.

⚠ **Caution** The wrong choice of pusher will cause pullout of the hose, leakage, or damage.

9 Insertion to pusher

Insert the coupling, to which the hose is inserted, into the pusher.

10 Fixing the other mate of the die

Put the other mate of the die on the base. Turn the die clamp to lock the die and fix it firmly.

⚠ **Warning** Do not put your hand in the die.

11 Adjustment of positions of die and coupling

Hold the hose beneath the die base with your left hand. Pushing the coupling toward the pusher, turn the pressurization screw clockwise with your right hand to send the pusher down.
As the pusher comes down, adjust the positions of the die hole and the coupling edge so they coincide.

⚠ **Caution** Discrepancy of the positions of the die hole and the coupling edge might cause damage to the coupling, such as socket defect.

12 Rotating handle

Attach the handle to the pressurization screw and rotate the handle clockwise to send the pusher down. Continue until the pusher touches the die.

⚠ **Caution** If you stop before the pusher touches the die, the swaging is insufficient and pullout of the hose or leakage may occur.

⚠ **Caution** If you do not stop rotating the handle even after the pusher reaches the die, the tool may crash.

⚠ **Caution** Do not take your hands off the handle abruptly. The handle will return in a dangerous fashion.

⚠ **Caution** For safe operation, do not get your hands trapped.

13 Detaching hose assembly

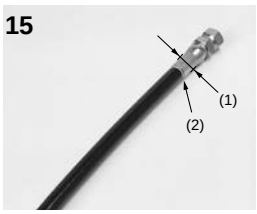
Un-install the die clamp, rotate the pressurization screw anti-clockwise to send the pusher up, and remove the hose assembly from the die. If it is difficult to remove the assembly, gently tap the die with the plastic hammer.

⚠ **Warning** Pay strict attention to prevent the die from falling.

14 Completion of hose assembling

⚠ **Caution** Before putting the die in storage, remove dust from the inner surface and thinly grease it to prevent rust.

15 Check of hose assembly



(1) Check the swage diameter (see p.81).
(2) Check the mark position of the hose insertion length.
(3) Check the appearance of the coupling. (Check for any damage or misalignment of the track of the die.)
(4) Check the appearance of the hose. (Check for any kink or cut.)
Should problems occur, do not use the hose assembly.

☞ For details such as maintenance, please read the instruction manual that comes with the product.

Setup and specifications

Specifications

Weight	: 90kg
Size	: 520x820x800mm
Electric motor	: three phase 200V 2.2kw
Hydraulic pump	: Max. pressure 14.3 MPa
	: Working pressure 11.2 MPa (Relief pressure already set)
Hydraulic cylinder	: Double-acting special cylinder stroke 150 mm
Working oil	: turbine oil VG46 or equivalent

☞ For details such as setting-up and electric wiring, please read the instruction manual that comes with the product.

Assembling method

1 Preparation

Prepare appropriate hose, swage connector, pusher, die, hose cutter, holding die, lubricant*, plastic hammer, scale, and white pen.

*lubricant...Steel coupling : Nihon Kosakuyu PG3740 or equivalent
Stainless coupling: Nisseki Mitsubishi CFH68 or equivalent

☞ A 50cc bottle of lubricant (for steel coupling) comes with a set.

⚠ **Caution** If the recommended lubricant is not applied, coating damage and/or socket buckling may occur.

2 Hose cutting

Determine the cutting length of the hose based on the hose assembling length and cut the hose squarely using the specific hose cutter

⚠ **Caution** Do not touch the blade of the cutter.

⚠ **Caution** The slanted cut section could cause pullout of the hose and leakage.

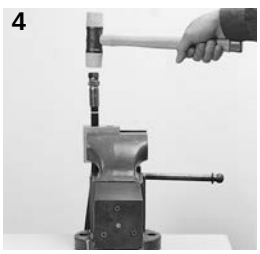
⚠ **Caution** If the blade is blunt, correct assembly is not possible. Change the hose cutter in this case.

3 Marking the insertion length of the hose

Measure the insertion length of the hose with the scale and mark the position on the hose with the white pen.

☞ It is recommended to draw a marking line of a width of about 2 mm in order to check it after the swaging.

4 Preparation for the hose insertion



Apply the lubricant to the inner surface of the hose and insert the coupling to the marked position. When it is difficult, use the holding die to fix the hose and hit the coupling with the plastic hammer.

⚠ **Caution** If the insertion is insufficient, pullout of the hose, leakage, or damage may occur.

5 Lifting pusher holder

Push the operation lever to the back to lift up the pusher holder.

⚠ **Warning** Do not let the pusher holder down before the die pusher is attached.

6 Attachment of pusher

Attach the pusher to the pusher holder. Fix the pusher by turning the screw of the pusher holder so that the pusher can freely rotate.

⚠ **Warning** Only operate with the power off.

⚠ **Caution** The wrong choice of pusher will cause pullout of the hose, leakage, or damage.

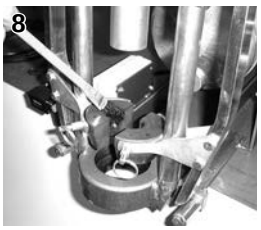
7 Fixing die

Attach the die onto the die fixing arm using the fixing pin.

⚠ **Warning** Only operate with the power off.

⚠ **Caution** The wrong choice of pusher will cause pullout of the hose, leakage, or damage.

8 Application of lubricant



Apply lubricant to the inner surface of the die.

*lubricant ...Steel coupling : Nihon Kosakuyu PG3740 or equivalent

stainless coupling: Nisseki Mitsubishi CFH68 or equivalent

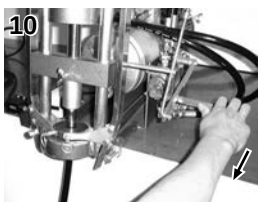
⚠ **Caution** If the recommended lubricant is not applied, coating damage and/or socket buckling may occur.

9 Insertion to pusher

Insert the coupling, to which the hose is inserted, into the pusher.

⚠ **Warning** Use a hose of sufficient length to hold the hose.

10 Hose assembling (1)



Hold the hose beneath the die base with your left hand. Pushing the connector toward the pusher, pull the operation lever with your right hand to send the pusher down.
As the pusher comes down, adjust the positions of the die hole and the connector edge so they coincide.

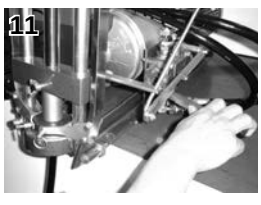
⚠ **Danger** It is dangerous to hold the hose near the die base. The die could trap your hand.

⚠ **Danger** Never touch the moving parts when operating the tool.

⚠ **Caution** Discrepancy of the positions of the die hole and the connector edge might cause damage to the coupling, such as socket defect.

⚠ **Caution** When the die closes, check that the hose is not stuck in the die.

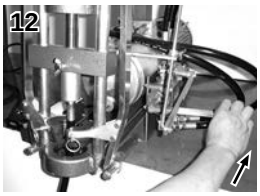
11 Hose assembling (2)



Pull the operation lever until the pusher touches the die.

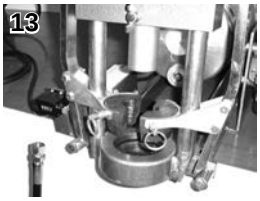
⚠ **Caution** If you stop before the pusher touches the die, the swaging is insufficient and pullout of the hose or leakage may occur.

12 Hose assembling 930



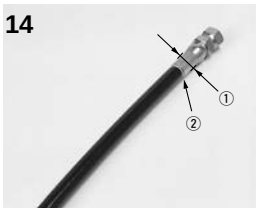
Push the operation lever to the back with your right hand to send the pusher up. When the pusher goes up, the die opens by itself and the hose assembly can be removed.
(The valve stopper adjusts the upper position of the cylinder.)

13 Completion of hose assembling



⚠ **Caution** Before putting the die in storage, remove dust from the inner surface and thinly grease it to prevent rust.

14 Check of hose assembly



(1) Check the swage diameter (see p.81).
(2) Check the mark position of the hose insertion length.
(3) Check the appearance of the coupling. (Check for any damage or misalignment of the track of the die.)
(4) Check the appearance of the hose. (Check for any kink or cut.)
Should problems occur, do not use the hose assembly.

☞ For details such as notes on operation, fine adjustment of each part, repair and maintenance, please read the instruction manual that comes with the product.

[Swage coupling] * For any couplings which are not intrroduced in the catalogue, please contact us.

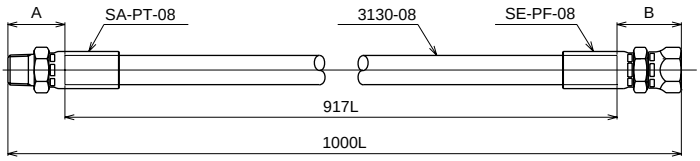
A Coupling deduction length

The cutting length of a hose is obtained by the hose-coupling assembly length minus the coupling deduction length*.

* Coupling deduction length: A (SA coupling) and B (SE, SF coupling) in the figure.

Ex. 3130-08 x 1000L SA-PT-08 x SE-PF-08
If you wish to make a hose assembly using the above, cut the hose at the length of 1000 - (39 + 44) = 917.

SE-PF-08
SA-PT-08

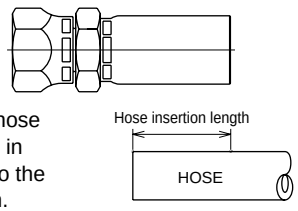


B Selection of pusher die

Part numbers are punched on pushers and dies.
The wrong pusher or die will cause oil leakage or pullout of the hose, or disable hose assembling, so always check the number.

C Hose insertion length

Hose insertion lengths are presented in the list below. A shortage of hose insertion length will cause oil leakage or pullout of the hose. So mark the hose at the hose insertion length given in the list and insert the coupling into the hose to meet the marked position.



D Socket outer diameter after swaging

The socket outer diameter after swaging is measured at the point of about 10 mm from the socket end. Please regularly check the finished size. If the size is not appropriate, consult us to avoid possible oil leakage or pullout of the hose.

*2 Use KM-04 for N3130 and 3700.

Assembling method

1 Preparation

Prepare appropriate hose, coupling, hose cutter, holding die, lubricant*, adjustable wrench, scale, and white pen.

*lubricant...Steel coupling : Nihon Kosakuyu PG3740 or equivalent
Stainless coupling : Nisseki Mitsubishi CFH68 or equivalent

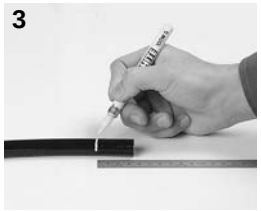
⚠Caution If the recommended lubricant is not applied, coating damage and /or socket buckling may occur.

2 Hose cutting

Determine the cutting length of the hose based on the hose assembling length and cut the hose squarely using the special hose cutter.

⚠Caution Do not touch the blade of the cutter.
⚠Caution The slanted cut section could cause pullout of the hose and leakage.
⚠Caution If the blade is blunt, correct assembly is not possible. Change the hose cutter in this case.

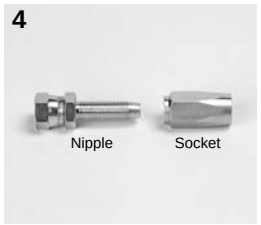
3 Marking the insertion length of the hose



Measure the insertion length of the hose with the scale and mark the position on the hose with the white pen.

☞It is recommended to draw a marking line of a width of about 2 mm in order to check it after the swaging.

4 Disassembling of coupling



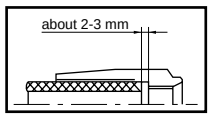
Disassemble the reusable coupling into socket and nipple.

5 Preparation to insert coupling

Nip the hose with the holding die, leaving the length of hose end to be inserted into the socket, and fix it in the vice. For easy screwing, apply lubricant to the surface of the hose end.

6 Insertion of socket

Insert the socket into the hose end and tighten it anti-clockwise with your hand. Then use the adjustable wrench to screw the socket to the position marked on the hose. Check that there is about a 2-3 mm space between the inner end of the socket and the hose end.



⚠Caution Caution: Stop screwing before the inner end of the socket reaches the hose end, otherwise damage to the core tube will occur and cause leakage.

7 Insertion of the nipple (1)

Remove the assembly from the vice and the holding die. Nip the socket with the vice and apply lubricant to the nipple thread and the inner surface of the hose.

8 Insertion of the nipple (2)

Tighten the nipple clockwise with your hand and use an appropriate adjustable wrench to slowly screw the nipple until its hexagonal part touches the socket.

⚠Caution Do not screw further, once the nipple touches the socket. It may cause damage to the coupling.
⚠Caution Using a machine to quickly screw the nipple may cause damage to the core tube or the coupling, leading to pullout of the hose or leakage.

9 Completion of hose assembling

After finishing the tightening of the nipples, check for deformation of the core tube by inserting a checking stick into the coupling.

10 Check of hose assembly

(1) Check the mark position of the hose insertion length.
(2) Check the appearance of the coupling. (Check for any damage.)
(3) Check the appearance of the hose. (Check for any kink or cut.)
Should problems occur, do not use the hose assembly.

☞For details such as repair and maintenance, please read the instruction manual that comes with the product.

[Reusable coupling] * For any couplings which are not intrroduced in the catalogue, please contact us.

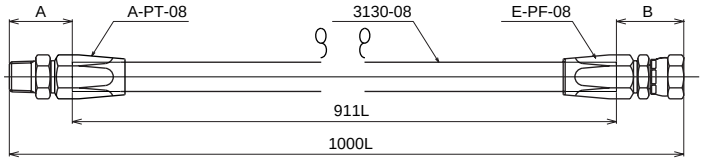
A Coupling deduction length

The cutting length of a hose is obtained by the hose-coupling assembly length minus the coupling deduction length*.

* Coupling deduction length: A (SA coupling) and B (SE, SF coupling) in the figure.

Ex. 3130-08 x 1000L SA-PT-08 x E-PF-08
If you wish to make a hose assembly using the above, cut the hose at the length of
1000 - (43 + 46) = 911.

E-PF-08
A-PT-08



B Hose insertion length

Hose insertion lengths are presented in the list below.
A shortage of hose insertion length will cause oil leakage or pullout of the hose. So mark the hose at the hose insertion length given in the list and insert the coupling into the hose to meet the marked position.

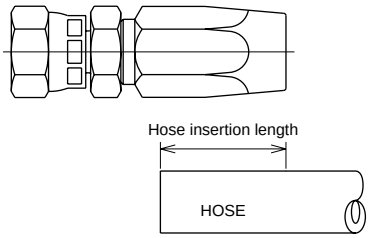


Table of hose screwing length

Hose series	Hose size	Reusable coupling part No.	A Coupling deduction length (mm)	B Hose insertion length (mm)

- Unit length in a package: 100 m for sizes 03, 04, 05, 06, 08, and 50 m for sizes 12,1

(6) (7)

(1) Size (inner diameter)

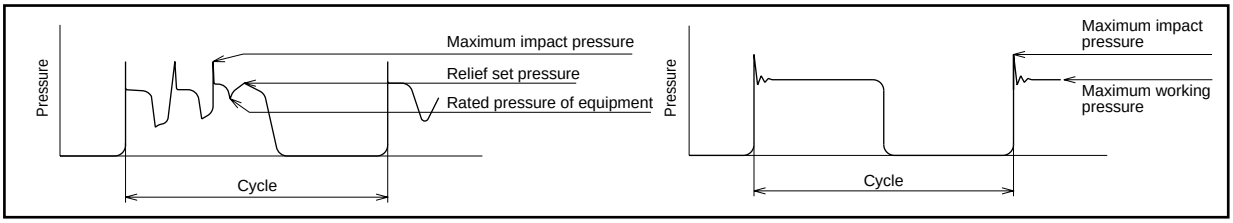
It is necessary to select the correct hose size (inner diameter) to obtain the necessary flow volume.
In general, the flow speed range shown below is the standard.
Too small an inner diameter of hose and coupling leads to an increase of flow speed, which causes problems such as pressure loss and increase of oil temperature. Pressure loss may vary with fluid viscosity, flow volume, and circuit length.
To see how flow speed, inner diameter, and flow volume, relate to each other, refer to [nomograph] on P.87

Pump intake and return line	0.5 to 1.5m/sec
Pressurization line	2.0 to 8.0m/sec

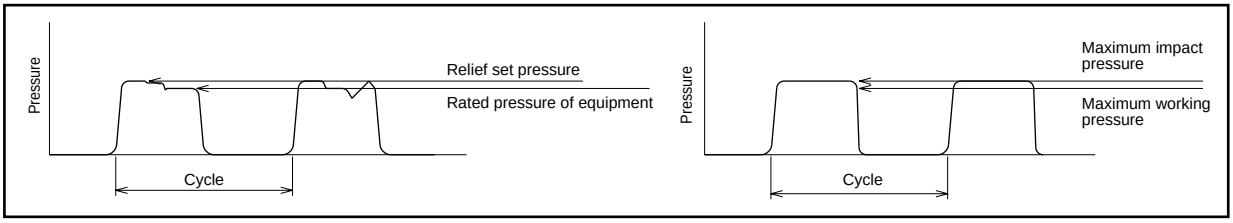
(2) Pressure

Fluid pressure in hydraulic circuits varies, e.g. negative pressure, static fluid, or impact pressure. The maximum working pressure (regular pressure) of the hose represents the maximum pressure for continuous use, and is generally set according to the relief set pressure.
However, since the impact pressure due to the opening and closing of circuits has serious influence on hose life, it is important to select suitable hoses so that the maximum impact pressure will not exceed the standard.
Although plastic is usually more rigid than rubber against negative pressure and can withstand small negative pressure, contact us if large negative pressure is expected.
The maximum impact pressure is about 1.5 times the maximum working pressure of case [A]. Refer to the catalog for case [B].

A



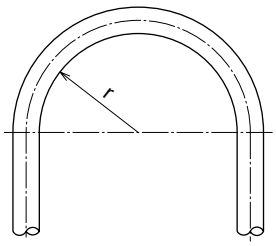
B



* The test examples are the pressure waveforms used for the hydraulic impact test machine. In particular [B] is provided for JIS, pursuant to SAE and ISO.

(3) Bending radius

The hose can be bent, but there is always a limit. If the hose is bent at a radius smaller than the minimum bending radius, deformation or kink of the hose may occur and cause problems.
Please bend the hose at a radius larger than the minimum bending radius.



r: Bending radius

(4) Coupling

The coupling consists of a connection to equipment, a hexagonal part, and a connection to the hose. There are various types of couplings ,including adaptors. Sometimes connections to the imported equipment do not work well because their thread and sheet shape differs from the JIS standard. Therefore, check the thread type, sealing method and sheet surface shape and angle of equipment to be connected before selecting couplings.

(5) Electrical insulation (nonconductive hose)

Plastic hoses in general have high electrical insulation. When electrical insulation is particularly necessary, e.g. for the hydraulic hose of electrical work equipment, leakage current is sometimes determined. Contact us in this case. When electrical insulation is required, a nonconductive hose without pin pricking (no pin hole for gas venting) is also available to prevent the reduction of electrical insulation due to external water invasion.

(6) Fluid type

Since the hose core tube is made of high oil resistant plastic , it will not be damaged by mineral or aqueous hydraulic oil. However, some types of synthetic hydraulic oil and nonflammable special oil could affect the hose.
Typical couplings and adaptors are made of zinc galvanized steel. Contact us if using a special fluid that may damage the material or the surface processing.

☞ Stainless couplings or black colored couplings (made-to-order) are also available if using water or glycol hydraulic oil.

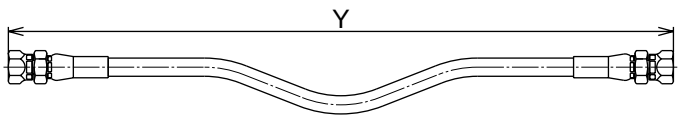
(7) Working temperature (fluid temperature, atmospheric temperature)

Using a hose at a temperature higher than the specification may cause thermal degradation and could shorten the hose life. Also using at a temperature lower than the specification could make the hose harder and frangible. When effects of atmospheric temperature, e.g. radiational heat, are expected, use a heat insulator to protect the hose.

Fixed piping

Since the length of the hose may change by ±3% when pressurized, give some extra length to the hose to prevent shrinkage stress. Also since the minimum bending radius is determined for the specification of each hose, follow the standard and keep the hose straight (for about the same length as the outer diameter of the hose) near the coupling edge to prevent sharp bending.

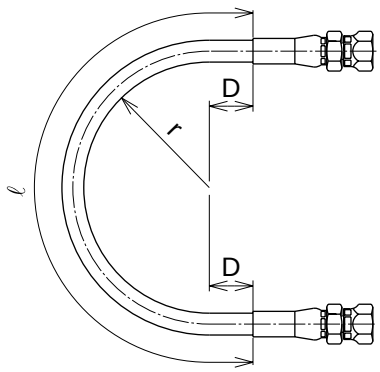
Formula when using the hose in a straight line



$L = Y \times 1.03$

L: Length of hose assembly
Y: Working straight length

Formula when using the hose in a U-line

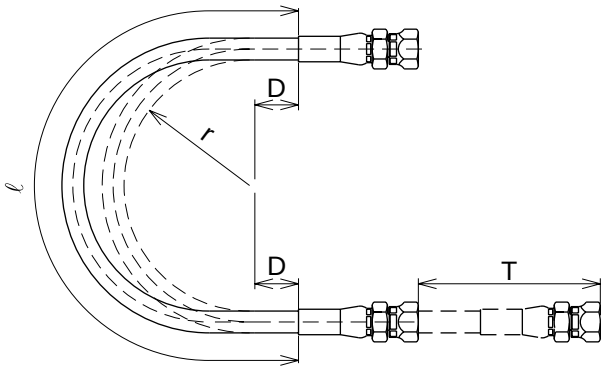


$\ell = \pi (r + D/2) + 2D$

ℓ: Free length of hose
π : Ludolphian number
r : Minimum bending radius of hose
D : Maximum outer diameter of hose

Movable piping

For movable hose, determine the hose length with attention paid to the hose movement to prevent sharp bending or kink near the coupling edge.



$\ell = \pi (r + D/2) + 2D + T$

ℓ: Free length of hose
π : Ludolphian number
r : Minimum bending radius of hose
D : Maximum outer diameter of hose
T : Stroke

Explanation of nomograph

The figure below is to help in the selection of the most suitable choice of hose for equipment. Keep the flow velocity in the column. If the flow velocity exceeds the recommended value, problems such as increased pressure loss and overheating could occur. Generally, when fluid flows in a hose, the “flow volume”, “flow velocity”, and “hose cross section” are linked as shown in the formula below.

$$\text{Hose cross section (cm}^2\text{)} = \frac{\text{Flow volume (}\ell\text{/min)}}{\text{Flow velocity (m/sec) x 60}} \text{ x 10}$$

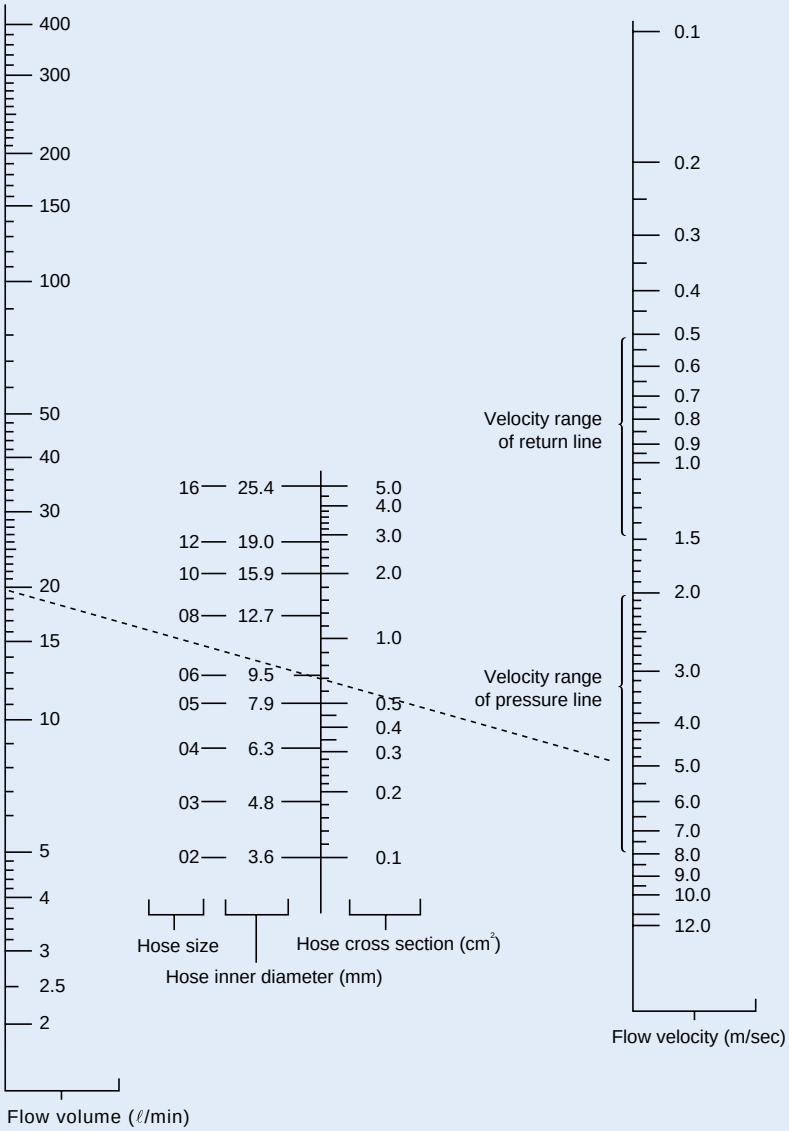
Therefore, if any two of the three are given, the rest is determined by this formula.

How to use the graph

(1) Select the discharge flow volume of the pressure line in the leftmost line graph.
(2) Select the flow velocity in the recommended range of the rightmost line graph.
(3) Draw a line connecting both points obtained above and find the correct hose inner diameter at the point where the line crosses the central graph.

[Nomograph]

(Ex.) When the flow velocity of the pressure line is 5 m/sec and the necessary flow volume is 20 ℓ/min, the recommended hose size is 06.



This figure is applicable to oil of maximum viscosity 66 cst (40°).

Graphs for cubical expansion of hoses

How to use the graph

1. ● represents the maximum working pressure
2. The hose size indicates inner diameter

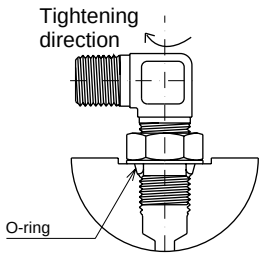
Steps to attach washer-faced elbow

⚠ **Caution:** Heavy-handed tightening with spanner, etc. may damage the body and washer.

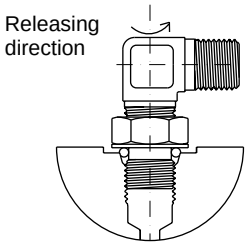
1. Connecting



Screw in with your hand until the O-ring contacts the port.

⚠ **Caution:** Clean the O-ring and apply grease or operating oil to the ring.

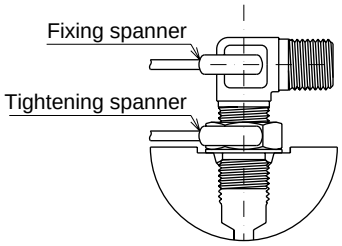
2. Positioning



Release the screw until the elbow reaches the position of hose connection.

⚠ **Caution:** Do not rotate more than 360° from step 1.

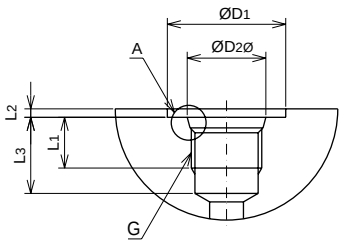
3. Fixing



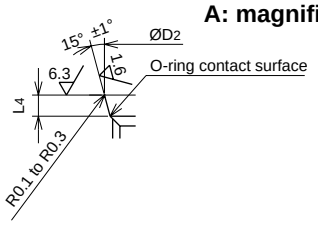
After connection to the hose, tighten the locknut with a spanner, etc.

⚠ **Caution:** See the list of locknut tightening torque. Try to maintain the right setting position.

Shape and size of JIS-standard O-ring port (JISB2351)



A: magnified



Thread name G	D_1±0.3	D_2 $^{+0.1}_{0}$	L_1 (Min)	L_2 (Max)	L_3 (Min)	L_4 $^{+0.40}_{0}$	Suitable O-ring number
1/8	18	11.6	10	1.0	15	2.0	P8
1/4	24	15.6	12	1.5	18	2.5	P11

- There must be no axial scratch or spiral tool mark on the O-shaped O-ring contact surface.
- D1 scraped surface must be squarely or flat to the thread axis.

Connection method of hose coupling (with sheet) and adaptor

1. Coupling

Tighten with your hand until the two sheets perfectly contact each other.

⚠ **Caution:** Adjust the axes of the coupling and adaptor to prevent non-uniform contact of sheets. After tightening with your hand, please check for any unwanted space between the coupling and adaptor.

2. Fixing

Fix the adaptor and nipple with a spanner so that the sheets cannot rotate together, and tighten the nut with a torque wrench (see the figure). When the rotation speed of the torque wrench is high, the surface pressure at the sheet surface is low, which might cause leakage. In this case, slowly tighten again until you feel a click.

⚠ **Caution:** The tightening torque should follow the figures in the “parallel pipe thread” table on the previous page. If the sheets are rotated while contacting each other, it will damage the sheet surface and cause leakage.

Chemical resistance list

Please refer to the attached chemical resistance list for the safe use of the products. Special attention should also be paid to the explanation written below.

[Criteria of availability for each chemical]

○ : No influence
△ : Further confirmation required
× : Not applicable
– : No data available

When consulting with us in case of △, following data are necessary for us to judge.
①Pressure in operation, ②Max. temperature in operation, ③Concentration of chemicals, ④Installation condition, ⑤Applicatio.

1. The data shown here are based upon laboratory. Variations in temperature, pressure, fluids duration of exposure or other special conditions influence the results in the list and therefore no guarantee is expressed or implied.
2. Please be sure to evaluate the products in the condition at a real workplace before use.
3. In case of aqueous solution in the list , the chemicals are all in a saturated condition at a room temperature , unless otherwise stated.
4. The list only shows chemical resistance at the liquid condition of chemicals but not referring at all to the gas permeation quality . Do not use the products for the chemicals which is dangerous if the gas permeates through/from the products.
5. Please consult with us about the chemical resistance for the galvanized materials.

☞ Campucka couplings are for the general operating oil and can not be used for any other kinds of liquids.

☞ When using the aqueous glycol operating oil, the materials for the couplings should be stainless or black oxidizing ones specially arranged upon request.
